## 3D Design and Manufacturing Software

**PRO100** is perhaps the easiest to use 3D design software on the market. Prove it for yourself by downloading the trial version at [www.pro100.co.nz](http://www.pro100.co.nz). It's FREE, it has all the design tools, and there's no time limit.

**PRO100** will help your sales – create stunning designs to show your client. Plans, elevations and 3D perspectives, zooming and rotating at will. Change colours and textures with a click of the mouse, and then clinch the sale with a photo-realistic view.

**PRO100** is quick. You can design in minutes because we've done most of the work already. We include libraries of the cabinets, appliances, objects and the hardware you need to build kitchens, wardrobes, bathrooms, living furniture or office fit outs. Just choose, drag and drop, then stretch as desired. Or you can create your own cabinets, building them on screen part by part, just like you do on the factory floor.

**PRO100** is flexible. Different people design in different ways. However you want to work, it's OK with us. For example, you can click on an object in Plan View, switch to Elevation or 3D Perspective, and continue working on that object, all with one click of the mouse.

**PRO100** is child's play to learn and use. There are no formulas and being Windows-based, it uses many commands you already know. Without needing any other software, you can get production data for any design, instantly –

- Cutting List for the project
- Hardware List for the project
- Linear material list for the project (e.g. edge tape)
- Pricing of the project

All these lists can be printed or exported to Word or Excel, allowing you to extract information for your costing, quoting or purchase order systems.

**PRO100** is a comprehensive design package. Here's some of what you get: Separate parametric libraries for:

- Kitchen Design
  - Wardrobe Design
  - Bathroom Design
  - Interior design
  - Office Design
- 
- Create any kind of cabinet or other item and add it to any library
  - Incredibly easy to use
  - No formulas involved
  - Automatic generation of cutting list for any new cabinet you create
  - Prices the Drawing
  - Change board colours and pricing at the click of the mouse
  - Add your own images to the programme (appliances etc)
  - Plan, Elevation & 3D Perspective views available in; wire frame, b & w, colour, textured, semi transparent and photorealistic modes
  - Fully dimensioned elevations and plans
  - Zoom and Rotate all with the click of your mouse

**PRO100** is available in special versions for linkage to a CNC Machining Centre. For details of a version which links seamlessly to the PROCAM Mityboy CNC, call Jacks on 0800 332 288 or visit [www.jacks.co.nz](http://www.jacks.co.nz). This version includes

- Comprehensive library of parametrically designed kitchen cabinets, including CNC machining code.
- Seamless linking to take the drawing to the nesting software supplied by Jacks.
- Easy to learn - just one day of training and you'll be sending projects to your Mityboy
