

Think you don't need an Optimising Saw?

Think Again!

- ✓ Huge Yield Gains
- ✓ Blinding Speed
- ✓ Deadly Accuracy
- ✓ Total Safety
- ✓ Full Versatility
- ✓ Simple to use
- ✓ Compact
- ✓ Scaleable
- ✓ Tight Costings
- ✓ Very Affordable
- ✓ Ask for a demo!

Whatever you're making, manual crosscutting affects your yield. Dimter's Opticut push saw could save 8 - 10% of your precious material. Think of that on your bottom line, every year!

Having trouble finding operators? An Opticut can reduce labour costs by 75%.

Can't get the accuracy? Would you settle for +/- 0.5mm with every cut at 90°, at full speed? And could you tackle new markets if this accuracy was assured?

Worrying about safety? Relax.

Thinking your runs are too small, or your material too varied? Forget it. An Opticut can do everything: Fast defect cutting. Accurate components. Green, dry, sawn, dressed. Single or multiple piece cutting. Boards, posts, profiles, mouldings, even rods. One piece or thousands. Fixed length cutting, optimisation of clearwood, or defecting to produce finger joint shook. Multiple cutting lists. Up to four different grades. Even plastics and non-ferrous metals!

Tight for space? Another problem solved. Say goodbye to your manual saw(s). An Opticut will give you 4 times the production on the same footprint.

Feeling you're not ready for automation? Why not? Using an Opticut is much simpler than manual crosscutting. There's a model to suit your present needs, and upgrades can be added later.

The bottom line: This machine can make you money. Lots of it. Ask for a demo.
