Weinig EasyStop-

Positioning your material has never been easier!

The automatic positioning system EasyStop handles the positioning of workpieces on almost every machine. The EasyStop helps you to perform your usual work faster, more comfortably and with greater precision.

The Stop System. The operating mode stop system replaces one-to-one working with manual position or length stops. The workflow remains the same - enter the desired position, align the workpieces against the stop and machine the workpiece. Time-consuming, recurring ancillary activities are completely eliminated with the automatic positioning system.

The Active workpiece transport. Starting from a loading position, the automatic positioning system EasyStop transfers the workpiece by the entered dimension. The machining width of the tool is, of course, taken into account when approaching the next position and it is stored as a machine parameter.

Angle machining. Makes the processing of workpieces with angles not equal to 90 degrees easier than ever! Based on the operating mode "active workpiece transport", the angle function is easy to activate via the setup. The operator is informed step by step via the interactive input form which information is currently required. The control system ensures the appropriate calculation of the information and positioning of the workpiece.

Weinig EasyStop-

Intuitive operation

The simple, intuitive operation and input takes place via the OptiCom 10" touch screen. The clear presentation shows all information at a glance.

Paper list or digital file - production lists can be created quickly and easily directly on the operator panel or transmitted via USB or Ethernet connection. The reading of barcodes is optionally also available.
