

Yilmaz DKN Stop System-

The DKN wind-along stop with digital readout.

The DKN is best suited to jobs where there is a mix of short and long sizes to be cut. It will dramatically reduce setting up the various sizes because the operator does not need to walk up and down the length of the conveyor to set the stop. They simply wind the stops to the size and lock the brake - simple!

The DKN stop uses roller bearings which travel on twin hardened steel slide-ways for maximum rigidity and longevity.
