

Yilmaz SKN Stop System-

SKN - an automatic programmable stop.

Eliminate the chance of costly errors with an SKN Automatic Measuring Stop. The operator simply inputs the size they require and presses 'go'. The stop automatically positions itself with accuracy to $\pm 0.2\text{mm}$. You get fast and accurate stop positioning.

The SKN range is fitted with the class-leading OMRON (Japanese) controller and touch screen unit also used in the twin-head mitre saws. Incredibly tough these have proven themselves in unforgiving working situations. The touch screen is also fully back-lit meaning it can be read in poor lighting conditions.
