

Yilmaz CRM200S Copy Router-

The CRM200S is the new single-head copy router from Yilmaz which sets a new benchmark for small aluminium machinery.

The high-frequency motor in the CRM200S is a smaller, more energy efficient and more powerful version than the motor in the FR221S. The higher frequency motor also helps to provide a superior finish.

The hollowed base allows for through cutting while the horizontal and vertical clamps prevent any movement of the workpiece. Table extensions with end stops to the left and right are provided as standard to support longer profiles.

The position of the lubrication unit can be adjusted to suit the tool length which enhances both the router bits life and quality of cut
