

Homag is the worldwide market leader of edgebanders, and their EDGETEQ range is perfectly suited to New Zealand.

A highly flexible allrounder, and based on the popular 'Ambition 1600' range (previously branded 'Brandt'), Homag's EDGETEQ S-380 machines feature a comprehensive range of units, high feed speeds and high-performance motors.

The glue application system allows you to switch easily between two colors or glue types (EVA, PU). What's more, the multifunction profile trimming offers rapid processing of radii and longitudinal edges. For frequent material changes, the multi-stage trimming unit and multi-stage scraper can be used.

- 6 different machines to meet every requirement
- Powerful machines for demanding applications
- Highly flexible configuration
- Intuitive operation - innovative powerTouch control system
- Impressive price-performance ratio

For the most demanding standards of quality and reliability there is no substitute for a Homag.

## Overview and features

- Flexible glue application system for easy changing of the color and glue type (EVA, PU)
- Multifunctional profile trimming for corner rounding and flush trimming
- Multi-stage technology for easy adjustment when changing materials
- airTec unit for the perfect zero joint
- Fully automated machine for excellent flexibility and easy adjustment
