

Maximum extraction in very little space!

With high operational comfort thanks to the quick-change chip collector system, and a large connection for tube and pipe extraction, this is a top quality European extractor to keep your workshop clean and tidy.

The AF16 features a steel frame for warp resistance as well as a 5mm thick steel impeller to resist any damage from large offcuts. The high-class motor from ATB in Austria guarantees reliability and suction power.

The AF16 is provided with a Class-L filter and can be optionally upgraded to a Class-M filter (Class-M is the recommended filtration level when working with wood-dust according to EN 60335-2-69:2012).

## Quick collection bag changeover

2 Quick-lock clamps on the front of the machine allow the most ergonomic changeover of plastic bags on a mobile extractor, making an otherwise difficult and dirty task extremely quick and clean.

## Optional Class-M Filters

The optional Class-M filters provide a higher degree of dust filtration for reduced contamination of your workshop. This is an active step towards ensuring the health of you and your workers.

## Optional Class-M Filter Cleaner

The optional Class-M filter cleaner keeps the filter clear of blockages for consistent high airflow results.

## Overview and features

Prod code: 401-247

## Specifications

<b>Motor</b>	2.2kW (3hp)
<b>Air flow</b>	50m <sup>3</sup> /min (1766CFM)
<b>Dust extraction</b>	160mm
<b>Collection bag</b>	1 x 200L
<b>Weight</b>	52kg
<b>Air pressure</b>	2150Pa
