## Work on doors on site

This machine's special fixing system allows the mortising of doors that have already been hung, without damaging the surface.

## Work horizontally

The machine is also able to work horizontally, which can be especially useful if deciding to make a series of mortises, with the doors unhung.

## Work on grooved or overlapping doors

It also allows for mortising of grooved doors or those with overlap, thanks to the possibility of adjusting the centre of the machine over the section of the door where the mortise is required.

## Overview and features

The FC116U comes standard with a hard metal lock mortiser bit Ø 15 mm, locking bar to make mortises on several doors at the same height, rubber protectors for delicate jobs, service keys and dust collector connection.
