

Frontline FR1220 Clamps-

A brilliant solution for edge jointing solid wood panels. Once you've seen the Frontline system, you'll never use sash clamps again!

- Press both vertically and laterally simultaneously - no more trial and error tightening while you try to obtain a flat panel with your mallet
- Better joints, because adjusting flatness by mallet tends to wipe glue off the faces
- At least four times faster than sash clamps, and without the risk of bowed or twisted boards
