

Tormek DC250 Diamond Wheel Coarse 250mm-

The Tormek Diamond Wheel Coarse has a grit size of 360 for fast steel removal when shaping and a rapid repair of a dull or damaged edge.

Tormek Diamond wheels have been developed specifically for Water Cooled Sharpening Systems. Thanks to the low speed of these machines, they are ideal for use with diamond wheels because no heat is generated.

The Tormek Diamond Wheels have exceptional durability, a consistent sharpening ability and always retain the full size diameter. Users who frequently sharpen the same tool will benefit from this feature as it simplifies both the setting and sharpening.

Tormek DC250 Diamond Wheel Coarse 250mm-

Overview and features

With Tormek's Diamond Wheels, you can sharpen all types of material, incl. steel, HSS, ceramics and carbide Fits Tormek T-8, Tormek T-7 and previous models with a 250 mm stone diameter.

The new Tormek Diamond Wheels come in three different grades; Coarse, Fine and Extra Fine. Thanks to the constant diameter of the wheel, it offers the ability to sharpen on the side as well as the periphery. Side sharpening is perfect for small carving tools such as carving gouges and V-tools plus plane irons, wood chisels and knives. The result is a bevel edge with a completely flat surface, instead of a hollow grind.

Included with every diamond wheel is 150 ml ACC-150 Anti-Corrosion Concentrate. Always use the concentrate in the water when sharpening with water to prevent rust on the grinding wheel. Add 10 ml of concentrate to 250 ml water (~4%). We recommend to always use water when sharpening with the diamond wheel, as it prolongs the life of the wheel and provides a finer surface. It is also possible to sharpen without water.
