

Nathan, Matt and Fynn. The boys no longer empty dirty dust bags!

dust efficiency

Morrow Furniture have been a key part of Auckland's custom-made furniture scene since 1981. Working with designers and fit-out specialists Morrow's 10 staff manufacture and install throughout the Auckland region, and nationwide. As Kevin Morrow explains, the Company's work comes from a strong reputation within their industry, and right now they're as busy as ever.

Passionate about their workmanship and quality, Kevin and his team are always looking for new efficiencies. The latest efficiency is a shiny new Micronair VC8 extractor, from Jacks. "I saw them at AWISA" says Kevin, "and I was impressed. Until recently we were using bag units, including a large four-bag unit in a shed outside. Now we have one powerful, modern extractor covering the whole factory."

Installation was quick and simple. "Bo at Ducts R Us did a fabulous job" says Kevin. "He's a perfectionist!" The VC8 unit is built to last in Australia, and at 18.5kW has plenty of suck. Constructed of galvanised steel it's designed to be placed outside, and is configured to sit astride a dump bin to ensure easy emptying. "The guys were thrilled!" says Kevin with a laugh. "They used to hate emptying the dust bags." Fynn confirms it instantly: "We had to crawl in there and get covered in dust. And it would always be raining. It was a filthy job. It's way easier now – we just pick it up with the forklift – all done."

As well as all the benefits of moving to a single extractor unit with far finer filtering, Kevin was also impressed by the Variable Speed Drive (VSD) offered with the VC8. VSD automatically monitors and optimises airflow, meaning as demand for extraction drops then so does the VC8's power use. This means if the workshop's not busy then the VC8 is using less electricity – saving power, and money – all while keeping the workshop cleaner and healthier than ever.

Woodworking Software Specialists

Design2Cam have vast knowledge of the industry and are in a position to help your business. The goal of Design2Cam is to ensure the solution is right for your business. Being a small team means they can offer a personal service with unrivaled support. Unlike corporate companies their staff can be contacted for support at any time. They help you when you need it, not just during office hours.

Design2Cam have a range of products to suit most aspects of the industry, from easy design through to cnc machine linked software. So whether you are looking for something to help with your presentations or want full drawing to cnc machine software they have a solution.

Anthony Scammell the owner of Design2Cam is an apprentice served joiner with over 40 years experience and takes pride in providing the right solution for your business. Whether your company is small, medium or large, everyone gets the same help and support. It is due to his background that Design2Cam are a proud sponsor of the Masterseal which promotes companies that use qualified tradespeople within their manufacturing processes. With his experience within the industry Anthony is able to offer help and advice to Design2Cam customers on many aspects of their business.

Design2Cam has two 3D design and manufacturing products aimed at different levels of the industry together with post processing software to talk to almost all cnc machines on the market.

Design2Cam products include, PRO100, PaletteCAD, Procentre and ASPAN. Both PRO100 and PaletteCAD are more than box design programs, neither require complicated formulas to create a construction method and can be used for many application not just for presenting a 3D Kitchen drawing. Their photorealistic rendering is superb allowing you to generate very high quality images.

PRO100 is so easy to use Design2Cam have a FREE downloadable demo version so you can see for yourself how the program works.
